

OpenRasta's Modules

OpenRasta is split in various modules that can be built independently.

core

The Core module contains the core and portable functionality in OpenRasta.

aspnet

The AspNet module contains the ASP.NET hosting and the WebForms codec.

castle

The Castle module provides support for using Castle Windsor as a container.

ninject

The Ninject module provides support for using Ninject as a container.

SharpView

The SharpView module contains support for a new C# view engine that ships with OpenRasta.

install

The Install module contains the code for the installer of OpenRasta.

vside

The vside module contains the visual studio project and item templates.

openbastard

The OpenBastard? module is the regression test suite for OpenRasta.
